Academic degree conferred: Bc.
Application deadline: 04/30/2018
Dates of the examination: 06/07/2018

More at: www.um.stuba.sk

At present, industrial enterprises in Slovakia do not have enough qualified specialists. Study program wants to bring into the labour market highly skilled graduates, both for professional and managerial positions and thus increase awareness about Slovakia, not simply as a cheap labour.

Investment planning in industrial enterprise has a multidisciplinary character because it combines knowledge from a technical sciences (e.g. construction, mechanical engineering, power engineering, etc.) and social sciences (e.g. economics, law).

Study program IPPP is accredited at the **Institute of Management of Slovak University of Technology (STU) in Bratislava**. Thus was underlined its interdisciplinary and integrative dimension, which concerns to education and research.

To this study program is preparing a Master's degree study program which will directly build on the Bachelor's degree. Currently is also

accredited a PhD study program **Sectoral and Branch Economies**, which may be studied externally.

During the studies, *students have the opportunity to participate* in exchanges within the **ERASMUS programme** at various **European universities**. The study program also includes the **practical training and excursions abroad**.

Bachelor's degree Graduate

The Graduate of the study program is an **expert** with the independent decision-making and analytical thinking. He/she is able to deal with partial **problems of industrial companies**, in particular concerning to the vocational management, technical, economic, informational, legal and other issues of business processes. The Graduate can **analyse risk** in investment planning and decision making because he/she obtains the knowledge from the management of technical, technological and production process and logistics. **After completion** of the first degree of study the Graduate will be prepared **for the study** on the **second level** (Master's degree) or ready for **immediate entrance into practice**.

Employment of graduates in the work process

The Graduate of the study program finds application mainly in industrial sectors including: **construction, automotive and other mechanical engineering industries, power engineering industry**, etc. After entering into practice he/she will find its application as a member of the creative team, its leader or individual responsible employee in the field of planning, financial management and evaluation of investments. Also in the function of lower and middle management, which focuses from strategies and operational planning to the daily routine especially in industrial companies, in the state administration but also in the educational system and so on.
